

Course End Project – PowerBI

1. Data Import and Merging

All eight Excel files were imported into Power BI using the Get Data option. In Power Query Editor, each continent table (Africa, Asia, Europe, NAM, SAM, Oceania) was merged with the KPIs (Fact Table) using the Restaurant ID as the common key via Merge Queries with a Left Outer Join. This ensured all restaurant performance data such as Average Cost for Two, Currency, Has Table Booking, Has Online Delivery, and Price Range were brought into each continent table. The Coun

17 COLUMNS, 438 ROWS Column profiling based on top 1000 rows PREVIEW DOWNLOADED AT 11:08

2. Africa Dashboard

The Africa page includes a map visual focused on South Africa, showing restaurant clusters in Cape Town, Johannesburg, and Pretoria. Key KPI cards display the Highest Average Customer Rating of 4.90 and the Lowest Average Cost of 110. A donut chart for Table Booking shows that 96.67% of restaurants in Africa do not offer table booking. A second donut chart breaks down restaurant count by city. A bar chart for Restaurant Votes shows the distribution of rating text, with "Very Good" being the most common at 35 restaurants. Cuisine and City slicers are provided for interactive filtering.

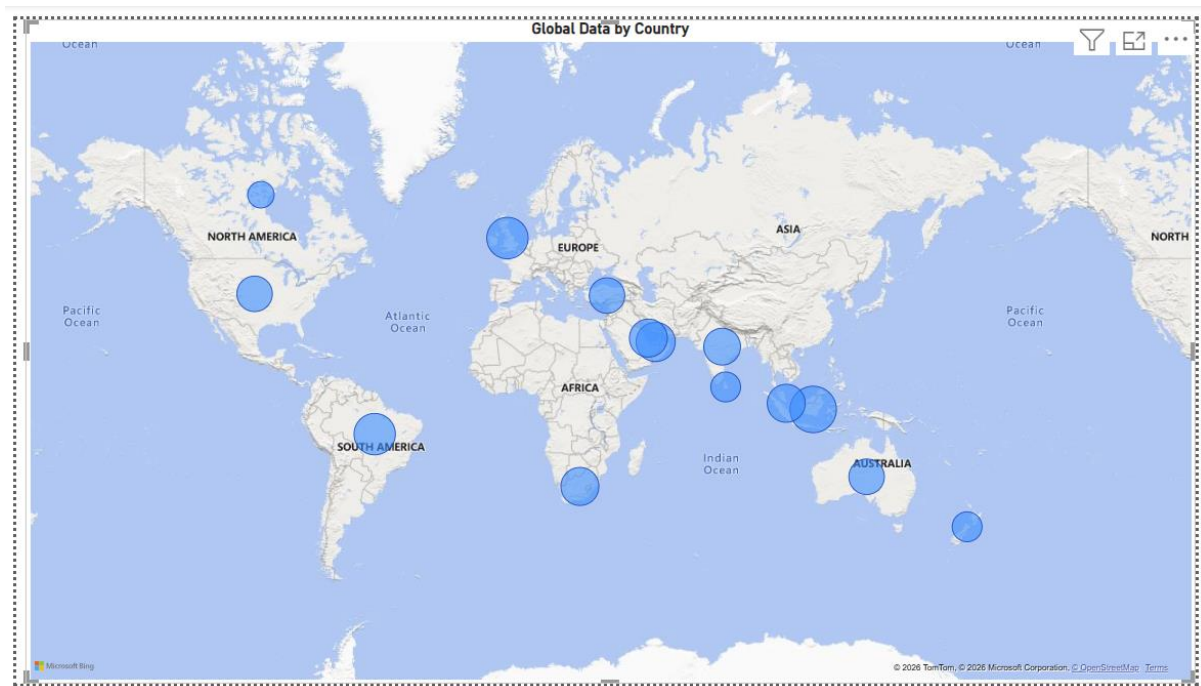

The Asia page displays a world map with restaurant clusters concentrated in South and Southeast Asia. The Highest Average Customer Rating is 4.90 and the Lowest Average Cost is 0. The Table Booking donut chart shows that 87.07% of Asian restaurants do not offer table booking. A table visual titled "Max Restaurant Count" shows that North Indian cuisine leads with 936 restaurants, followed by North Indian, Chinese with 511. A city-level table lists restaurant counts across cities, with a total of 8,849 restaurants in Asia. The Restaurant Votes bar chart shows "Average" as the most common rating category with 3,700 restaurants.

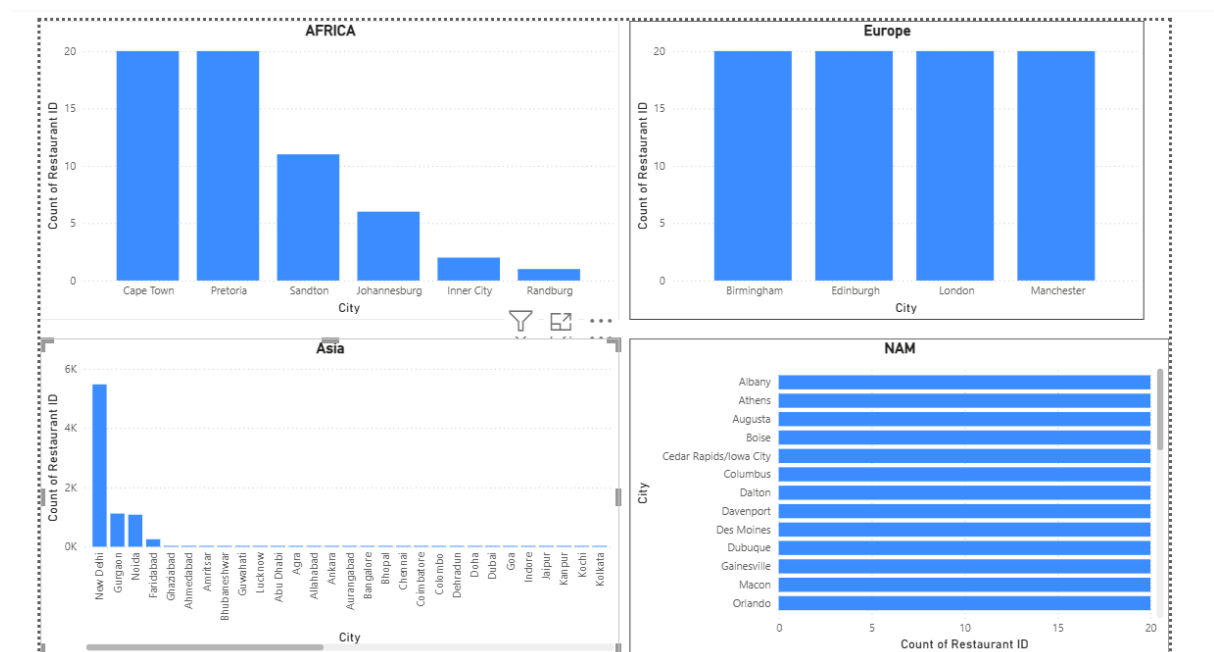

4. Global Restaurant Distribution

A global map visual titled "Global Data by Country" was created to display Uber Eats' restaurant presence across the world. The bubble size on the map represents the concentration of restaurants in each region. The map provides a clear view of coverage across North America, South America, Europe, Africa, Asia, and Oceania, giving management a single-screen overview of global operations.

5. City-Level Restaurant Count by Continent

A dedicated report page was built to show restaurant counts broken down by city within each continent. Bar charts were created for Africa, Europe, Asia, and NAM separately. In Africa, Cape Town and Pretoria lead with 20 restaurants each. In Europe, Birmingham, Edinburgh, London, and Manchester each have 20 restaurants. In Asia, New Delhi dominates with close to 6,000 restaurants. In NAM, most cities show an equal count of 20 restaurants each.

Conclusion

The Power BI dashboard successfully consolidates restaurant data from six continents into an interactive, multi-page report. It enables Uber Eats management to view global restaurant distribution, drill down to continent and city level, analyze ratings and costs, monitor table booking and delivery service availability, and filter by cuisine and city — all from a single, unified report.
